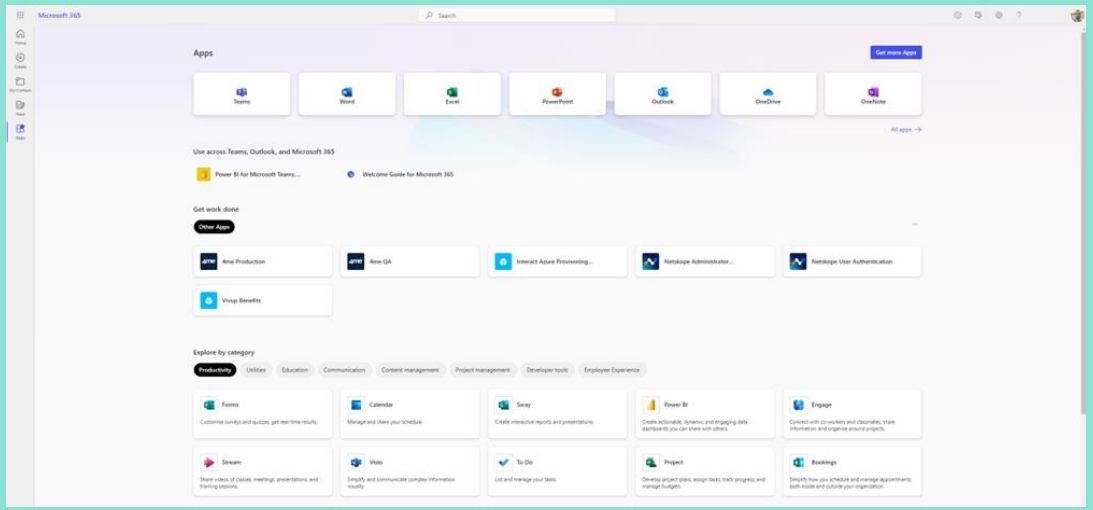
What is Microsoft 365 Online?

mha
Live later life well

Microsoft 365 Online



M365 Online allows you to access Office for the web applications such as Outlook, Word, Excel, and PowerPoint within your internet browser.

You will be able to open cloud files and email attachments, create, save, and share files no matter which computer you login to as your files are saved online rather than on your computer or a single server.

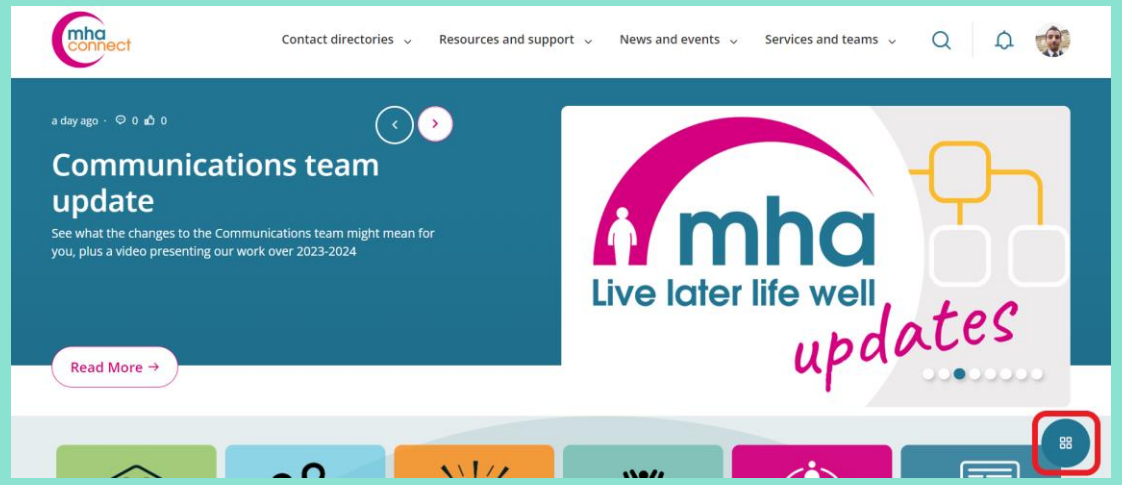
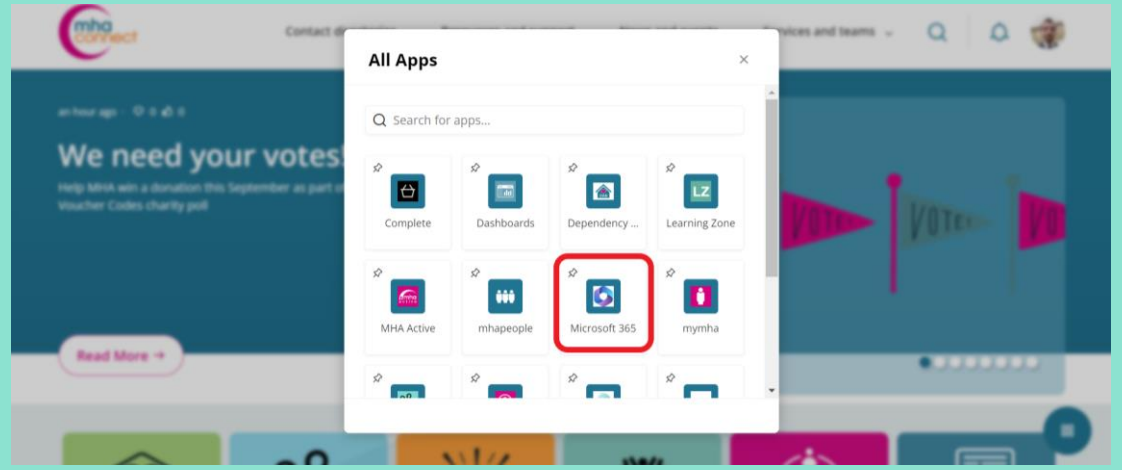
Accessing Microsoft 365





Microsoft 365 for the web can be accessed through **MHA Connect**.

- Open a web browser such as **Google Chrome** or **Microsoft Edge** using the shortcuts on your desktop or taskbar at the bottom of your screen.
- **MHA Connect** will load up as your homepage and you will be automatically signed into your Microsoft account.
- From the homepage, click on the '**All Apps**' menu button in the bottom right corner of the screen.
- Within the '**All Apps**' menu click on the '**Microsoft 365**' app shortcut.

The Microsoft 365 Menus

mha
Live later life well

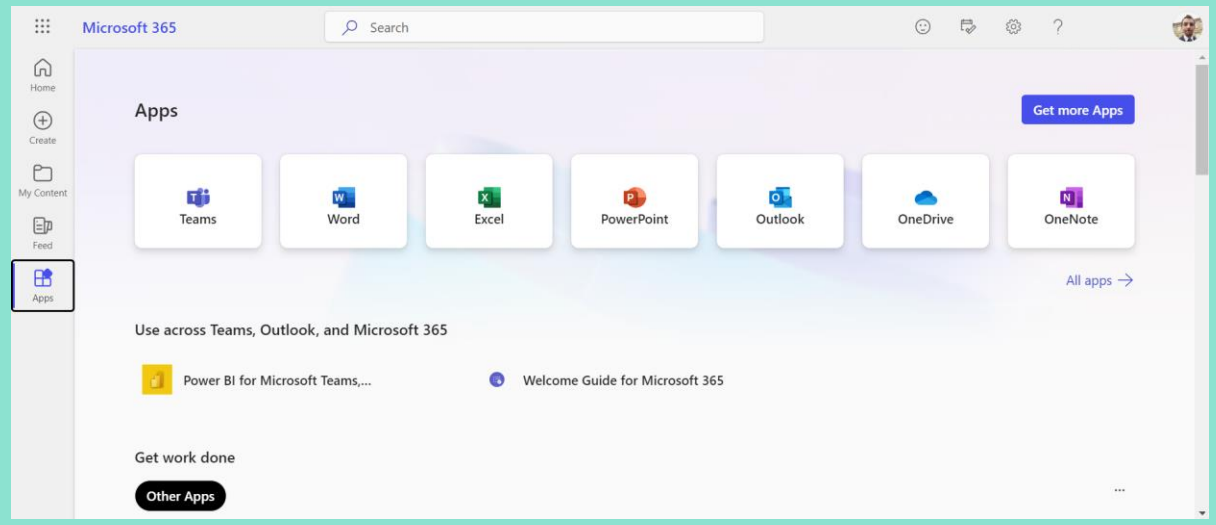
Microsoft 365 ‘Apps’ Menu

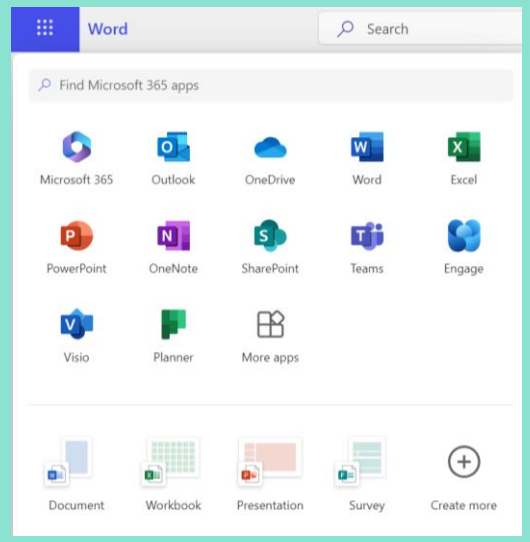
The Microsoft 365 Apps menu allows you to access **Office Online** apps. Some of the apps that you will be able to access are:

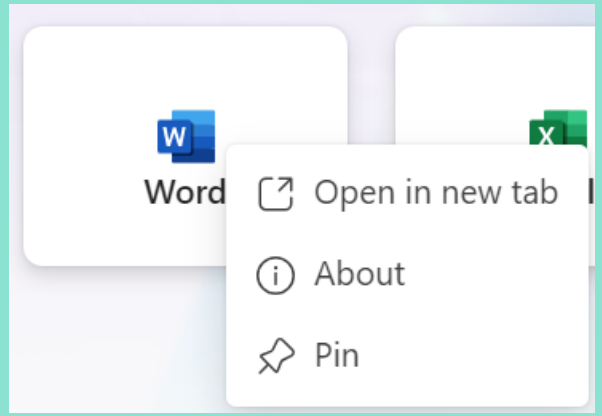
- Word
- Teams
- Excel
- PowerPoint
- Outlook
- OneDrive
- OneNote

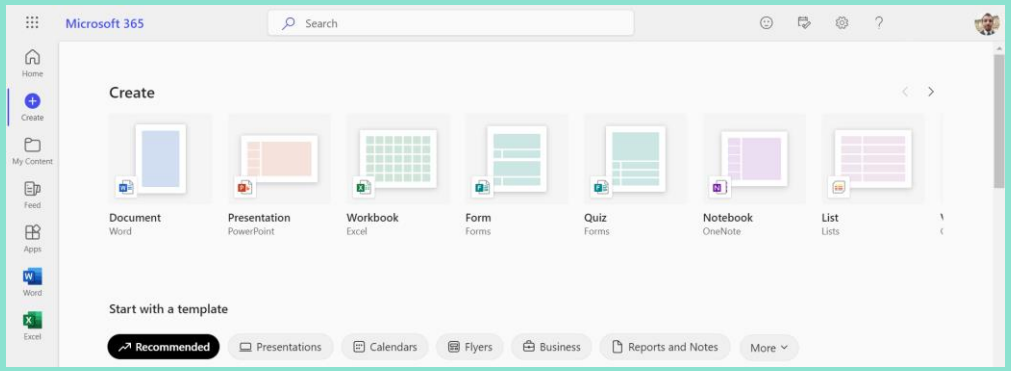
You can left-click on an app to enter the specific menu for that application, or you can right-click on an app and select ‘**Open in new tab**’ to keep the main apps menu open. Alternatively, click the square in the top left corner to see all your available apps or quickly create a new document.

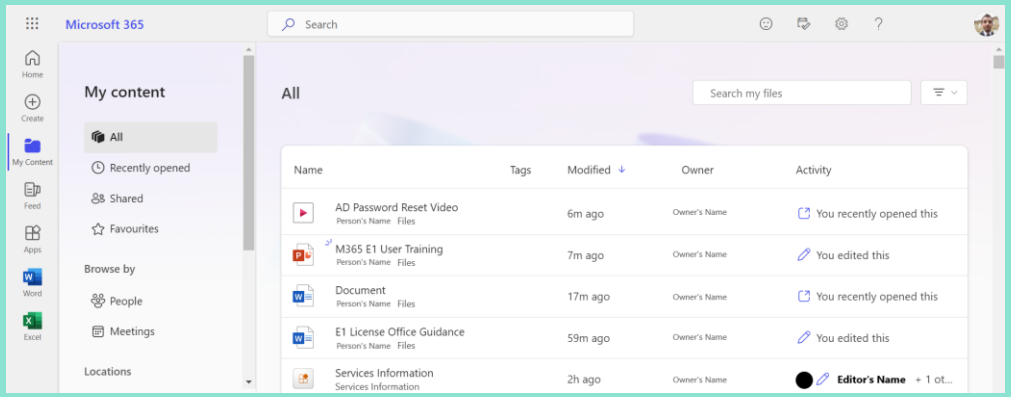
You may also want to pin the main apps that you use. To do so, right-click on an application and select ‘**Pin**’. The app will now appear as a shortcut in the menu on the left of your screen.

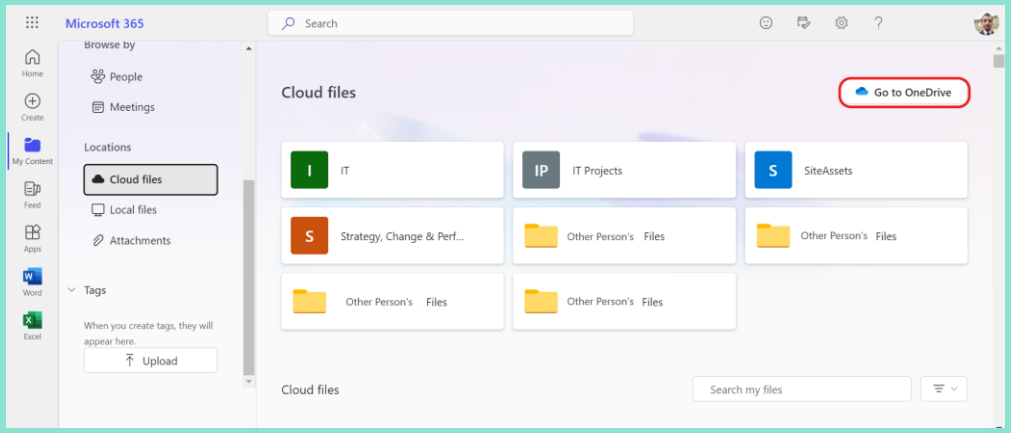












Microsoft 365 ‘Create’ and ‘My Content’ Menus

The Microsoft 365 ‘**Create**’ menu allows you to quickly create a new file using any of your available apps.

- To create a new file, left-click on the type of file that you want to create. This will then open a blank file in a new tab within your web browser.

The Microsoft 365 ‘**My Content**’ menu allows you to access your files.

- You can filter your files using the options in the menu on the left side of the screen. You can also search for a file by name using the search bar.
- You can filter files by ‘**Recently Opened**’, ‘**Shared**’, and ‘**Favorites**’.
- Browsing by **People** or **Meetings** allows you to see all the documents that individual people have shared with you or shows you all attachments that were shared during specific meetings.
- The final filters are based on file location e.g. SharePoint, OneDrive, email attachments.
  - **Cloud files** displays any SharePoint or OneDrive files that you have access to. You can also quickly access your OneDrive by clicking on ‘**Go to OneDrive**’.
  - **Local files** shows any files that are saved to the computer’s hard drive.
  - **Attachments** shows you any email attachments that you have received.

mha

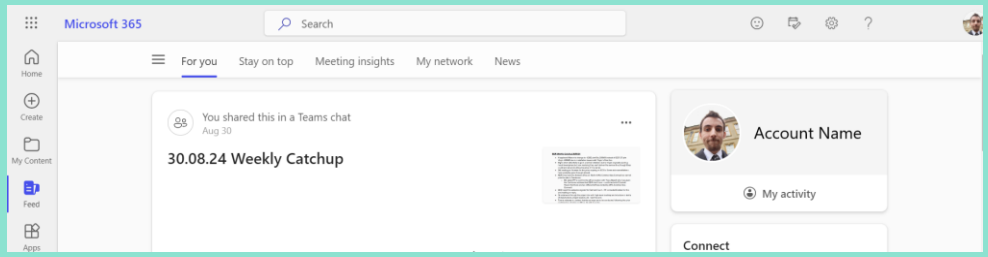
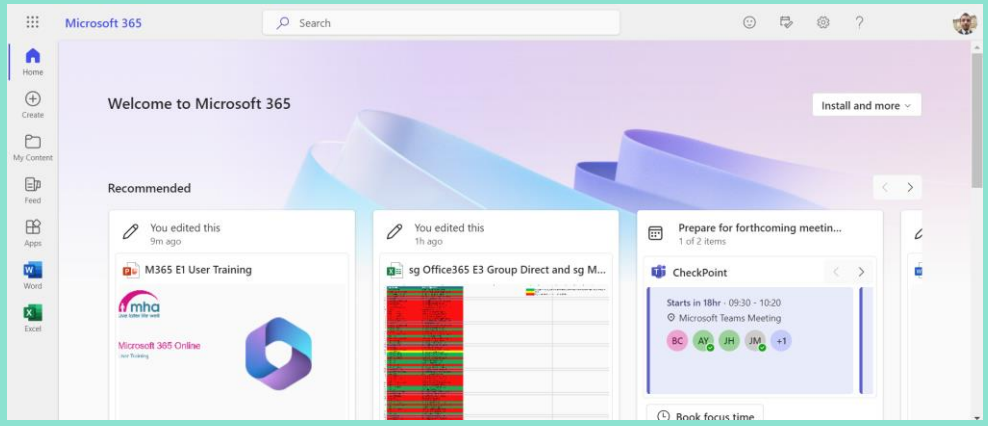
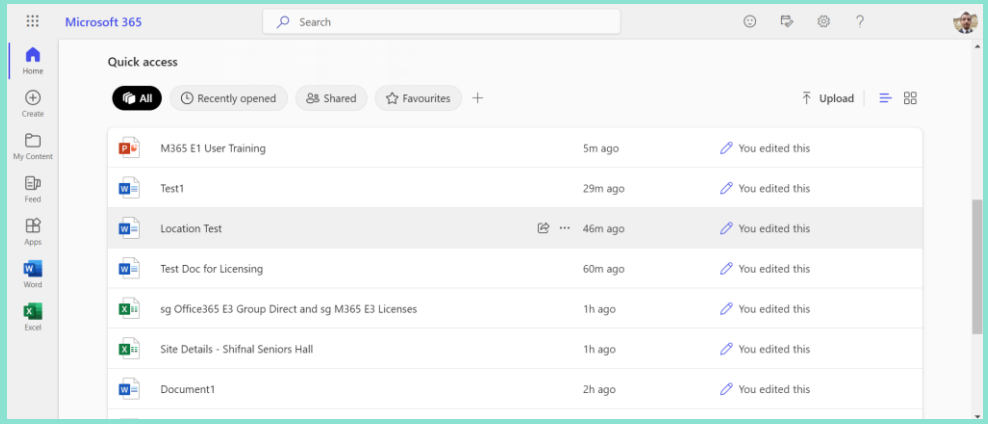
Microsoft 365 ‘Feed’ and ‘Home’ Menus

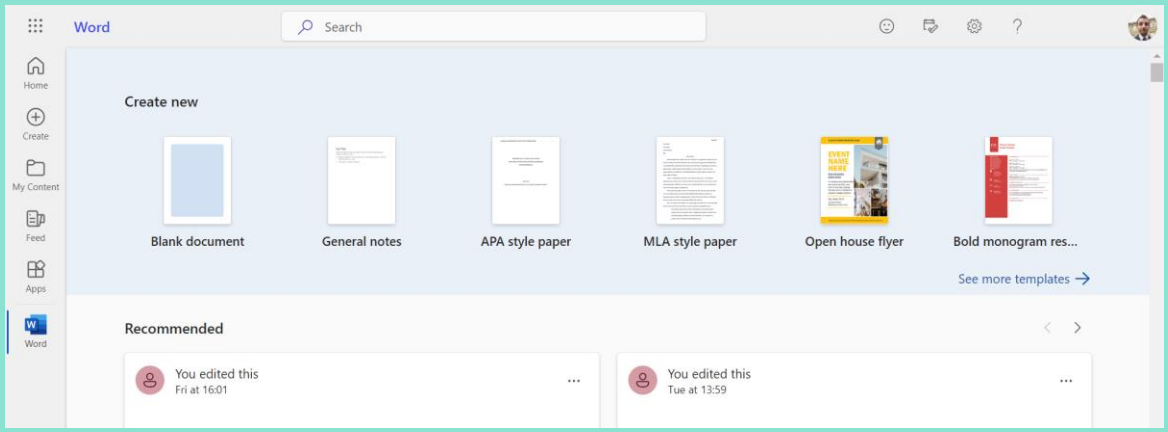


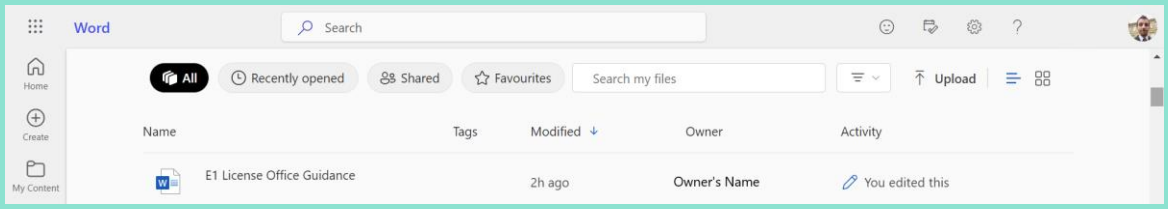
The ‘**Feed**’ menu shows the latest activity performed on files that you have access to amongst other functions. The menu is probably the least relevant to daily tasks.

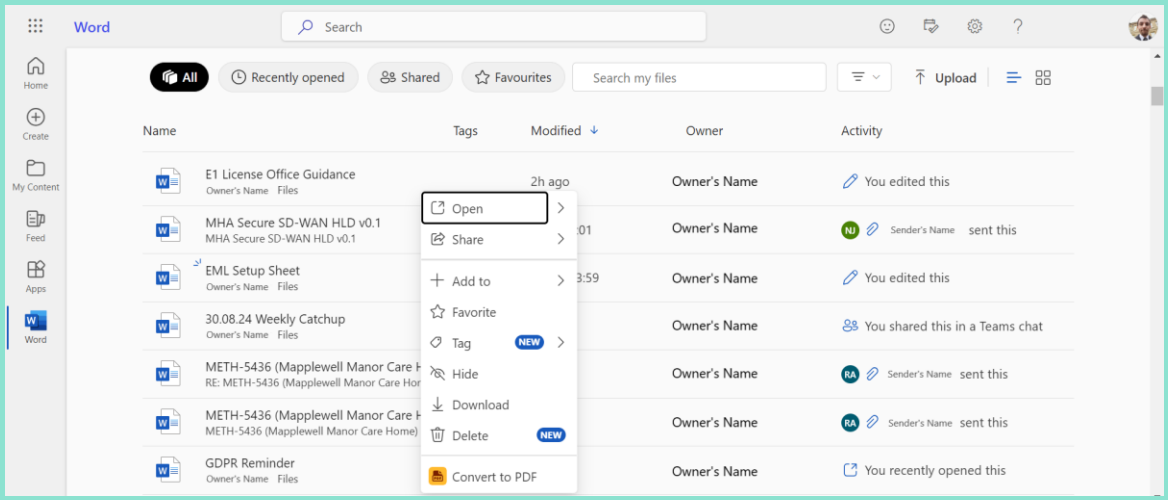


The ‘**Home**’ menu allows you to see recent file activity and quickly access your existing files, this menu is useful for accessing recently modified files but does not have much function other than being a general hub.









Office App Menus

Each Office Online app has its own menu. This menu allows you to create new documents, open existing files, share, delete and see recently opened files.

- To create a new document, click on the '**Blank document**' option under '**Create new**'.
- Scroll down to see your available files. You can filter the files that have been opened recently, shared, or marked as favourites by clicking on the indicated buttons. You can also search for a specific file using the search bar.
- Files display their name and where they are located e.g. within your own files, within an email attachment, etc. You can also see when the last time a document was changed, who is the owner of the document, and what the recent activity is e.g. edited, shared, opened, etc.
- To open a file, hover your mouse over the file name and left-click.
- To see additional options, hover your mouse over a file and right-click to see the various options available to you e.g. open, share, delete.

How to Create New Files

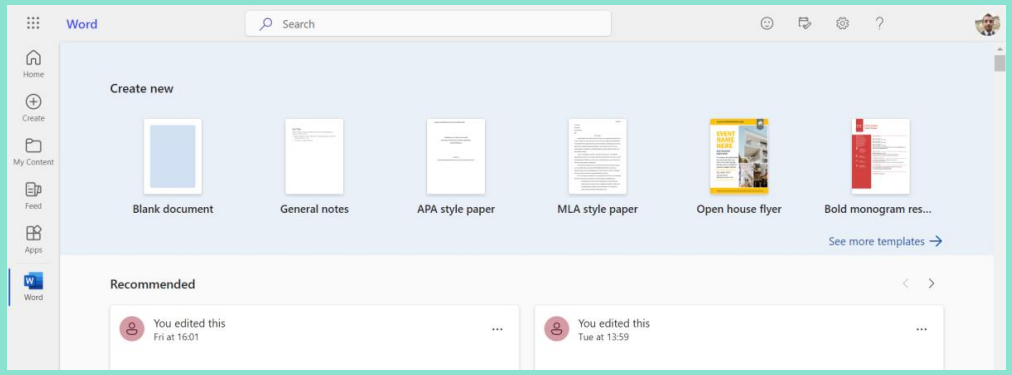
To create new files on Office for the web you can use one of four methods:

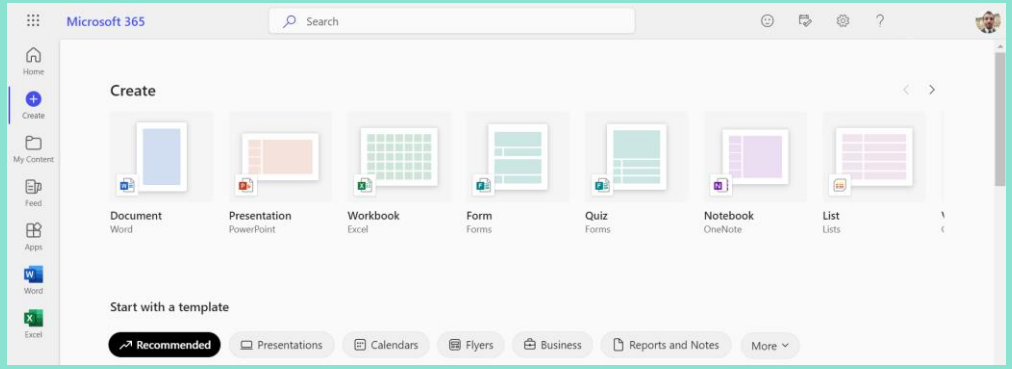
1. From the ‘**Create**’ menu click on the type of document that you want to create.

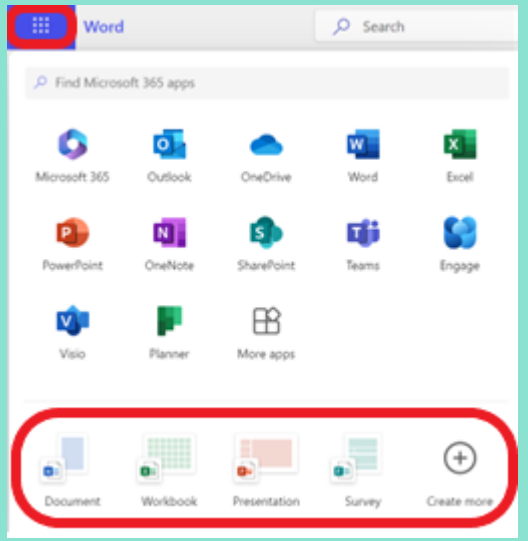
2. From the ‘**Apps**’ menu, click on the relevant app for the type of file you want to create then choose the blank option under ‘**Create new**’.

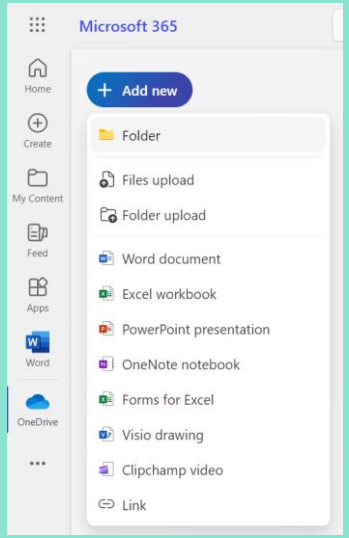
3. From the ‘**Apps**’ menu, click on the ‘**OneDrive**’ app. Click on the ‘**My files**’ menu or relevant SharePoint group under ‘**Quick access**’. Click into the folder that you want to create your new document in and then click the blue ‘**Add new**’ button in the top left corner. Choose the type of document, give it a name then click ‘**Create**’.

4. Click on the square in the top left corner of the screen, then select what type of files you want to create from the bottom of the menu.

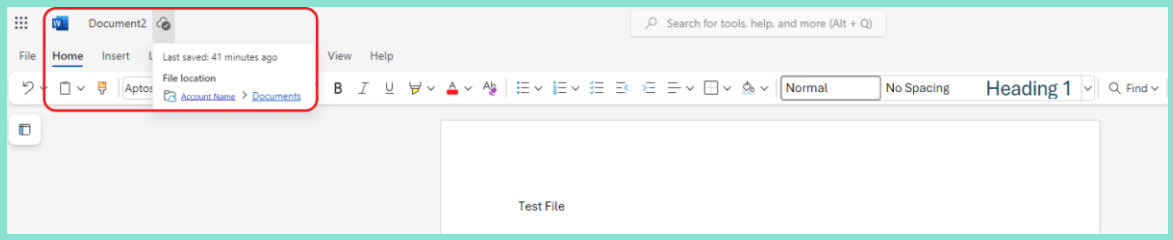


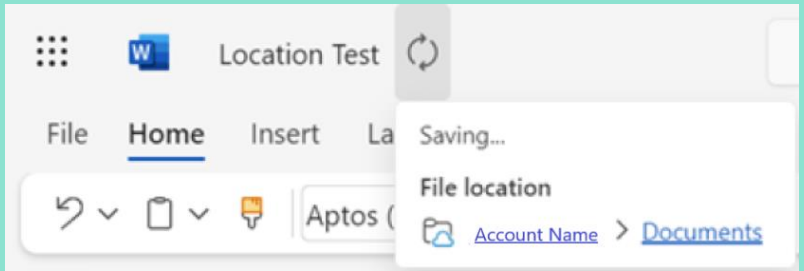


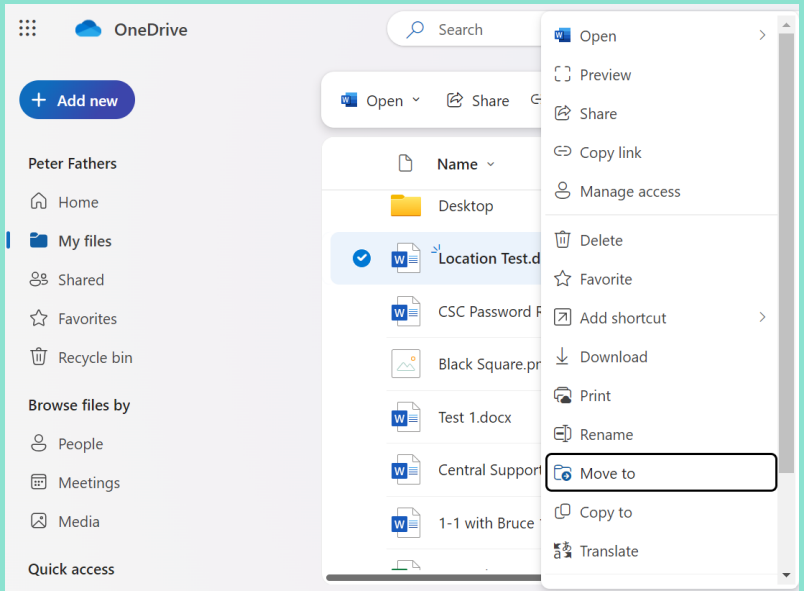




How to Save New Files







When you create a new file, your progress will start to be saved automatically to OneDrive or SharePoint. By default, the file is named '**Document1**', '**Book1**', etc. and saved to the base folder of OneDrive unless you used Method 3 in the previous slide to create the file.

- To rename the document, click on the current name, press the '**Delete**' on your keyboard, and type the new document name. You can then either press 'Enter' on your keyboard or click back into the document to apply the change.
- You can see whether your file is being automatically saved by checking if there is a tick over the cloud symbol next to the document name. If there are arrows showing, this indicates that your document is in the process of saving.
- Clicking on the symbol will show you when the document was last saved and the location that it was saved to.
- To change the location the document is saved to, click on the linked location to open the folder in OneDrive or SharePoint. Locate your file, right-click it and select '**Move to**' and then navigate to the folder you wish to save the file to, then click '**Move**'.

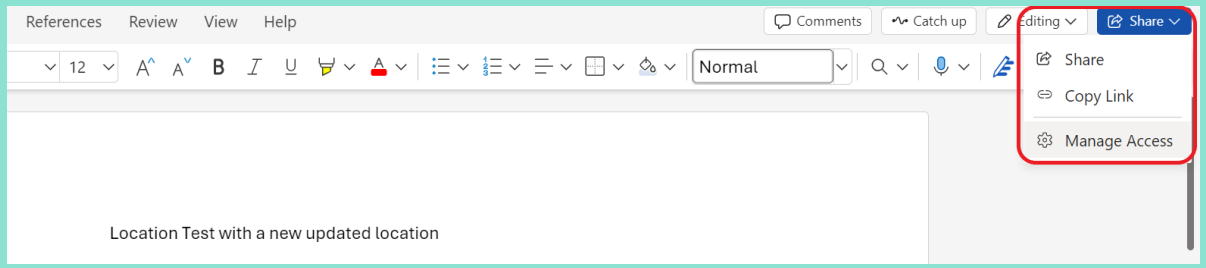
How to Share Files

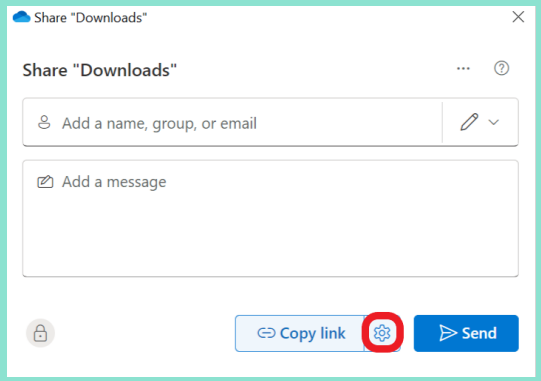
Using Office for the web allows you to easily share files or work collaboratively on the same file simultaneously. To collaborate with someone else on a file, you will need to share the document with them.

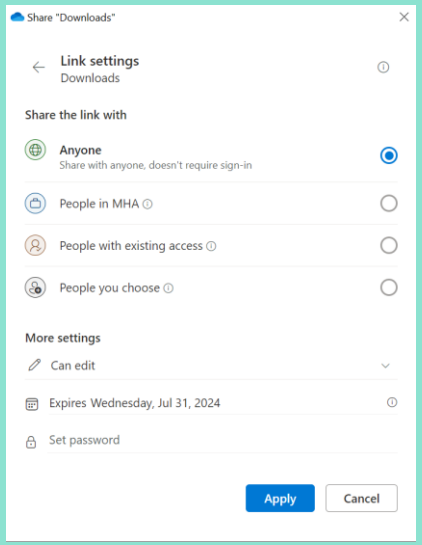
- To share a file whilst you have it open, click on the blue '**Share**' button and then either '**Copy Link**' or '**Share**' option.
  - '**Copy Link**' will generate and copy a link which you can send via email or Teams to the person you want to collaborate with. By default, the link will last for 30 days and allow anyone to access and edit the file. However, you can change this by selecting the '**Settings**' option.
  - '**Share**' allows you to enter the name of the person, or people, you want to collaborate with and send them a direct access link to the file with a short message.

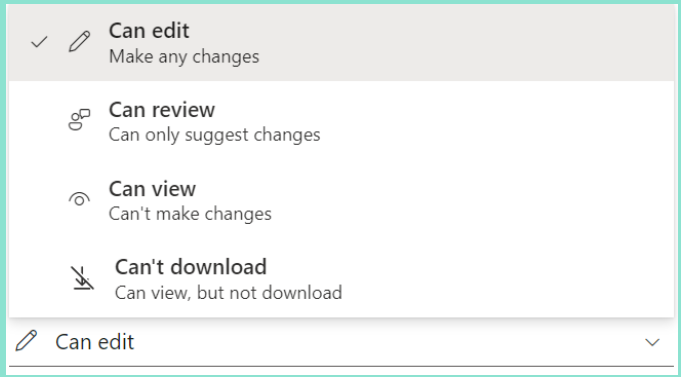
You can set what level of access the people you share your files will have with the following options:

- **Can Edit**
  - Allows others to make changes.
- **Can Review**
  - Others can add comments but not make changes.
- **Can View**
  - Others can view the file but not make changes.
- **Can't Download**
  - Others can view but does not allow the file to be downloaded.

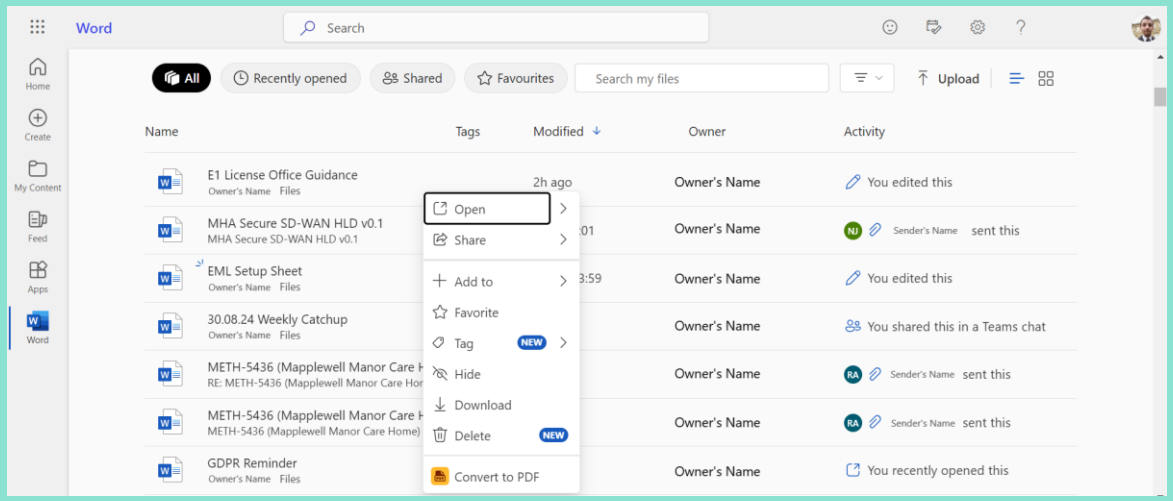


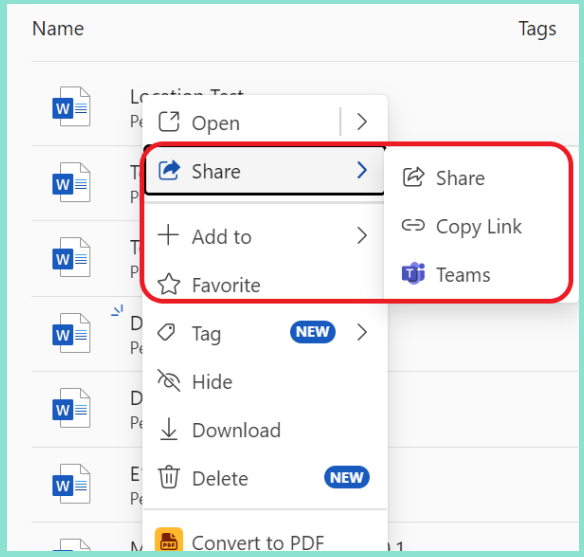


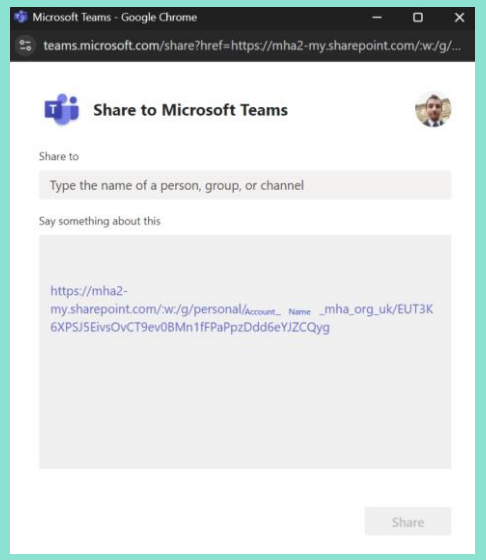




How to Share Files







You can also share files from the '**My Content**', '**Home**', or app menus. Right-click on a file and select '**Share**'.

- Just as when sharing from within a file, here you can either select '**Copy Link**' or '**Share**', however there is also an additional option to share the file through Teams.

- When sharing through Teams is selected, you can type the name of the person, group or Teams channel that you want to share the file with and add a message along with a link to the file before clicking the '**Share**' button.

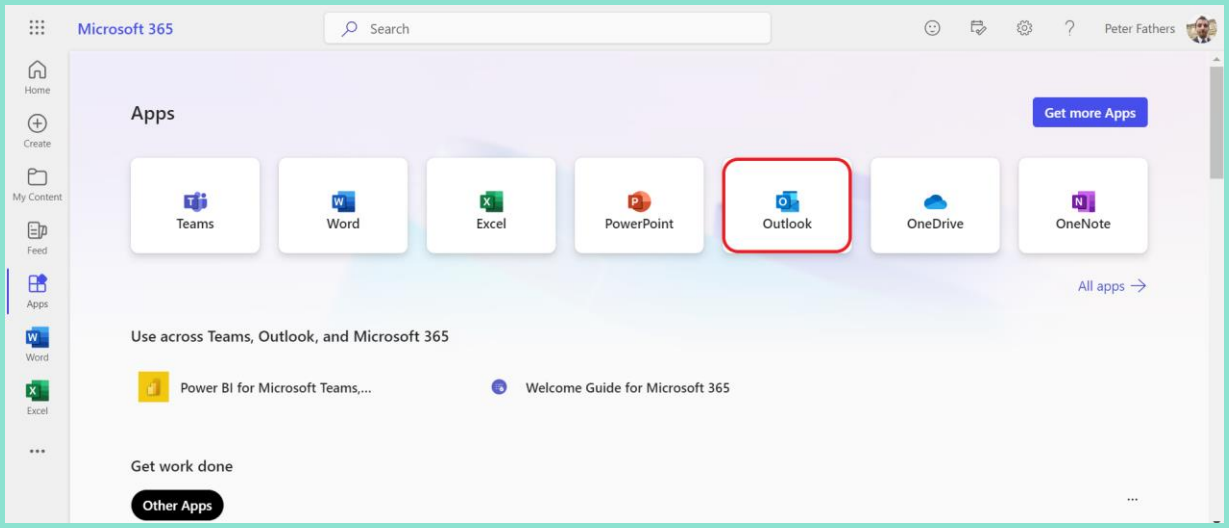
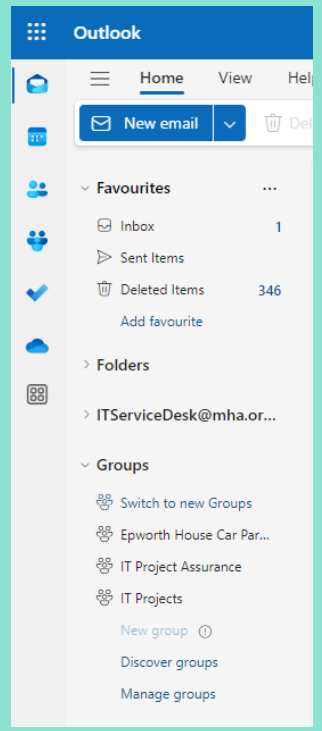
How to Access Emails

mha
Live later life well

How to Access Emails

You can access your emails through **Outlook**. The app can be found via the '**Apps**' menu.




- Left-click on the **Outlook** app to open your inbox in a new tab in your internet browser.
- You should be able to see all your emails within the inbox.
- If you have access to any shared mailboxes, these should also appear in the menu on the left side of your inbox.
